

ASSIGNMENT 2 USER STORIES AND ACCEPTANCE CRITERIA

Epic Theme	Persona	User Story	Acceptance Criteria
User Management	General users (vendors and hirers)	As a general user, I want to register my user type, name, phone number, email and password, so that I can log in to the web app	1. Given the general user opens the registration page, When the page loads, Then the system displays a registration form with first name, last name, email, password, user type, phone number, and confirm password fields. 2. Given the general user is typing in the password or confirm password field, when characters are entered, when the characters are hidden/masked. 3. Given the general user enters an email address, When the general user submits the form, Then the system validates the email format and displays an error if the format is invalid. 4. Given the user fills in the password and confirm password fields, When the general user submits the form, Then the system validates that both fields match and displays an error if they do not. 5. Given the general user enters a password, When the user submits the form, Then the system validates that the password meets strong password requirements and displays an error if it does not. 6. Given all fields are valid, When the general user submits the form (by clicking submit or pressing enter), Then the system registers the account and navigates the user to the login page.
User Management	General users (vendors and hirers)	As a general user, I want to login to the website, so that I can access key user features.	1. Given the general user (hirer or vendor) opens the login page, when the page loads, then the system displays the login form with email and password fields. 2. Given the general user enters input into the password field, when characters are entered, then the characters are hidden/masked. 3. Given the general user enters their email address into the field, when the user submits the form, then the system should query the MSSQL database to check if a user with that email address exists in the database. 4. Given the general user has submitted an existing email and password combination, when the MSSQL database has found a user with the general user's inputted email address, then the system should successfully validate that the hashed password stored is the same as the general user's inputted password. 5. Given the general user has submitted a correct and existing email and password combination, when the user submits the form, then the system should redirect the user to their dashboard, alongside a notification confirming they have logged in. 6. Given the general user has submitted a correct and existing email and password combination, when the system has confirmed the inputted details match a user in the MSSQL database, then the system should provide a logout link for the logged-in user.
User Management	General users (vendors and hirers)	As a general user, I want to view and edit my user profile, so that I can see my user details and update them when I need to.	1. Given the general user has logged in, when the general user clicks the 'Profile' link in the header, then the system should redirect the user to the Profile page. 2. Given the general user has clicked the 'Profile' link in the header, when the system displays the profile page, then the system should display the general user's details, including first name, last name, phone number, and email. 3. Given the general user is on the Profile page, when the user clicks the 'edit profile' button, then the system should display a form allowing the user to edit their first name, last name, and phone number. 4. Given the general user has entered only alphabetical characters into the first/last name fields and exactly 10 numbers into the phone number field, when the user clicks the submit button, then the system should update the user's details in the MSSQL

			database and display them in the user interface.
Searching venues	Hirers	As a hirer, I want to check a venue's recommended suitability so that I can find venues best suited for my needs.	1. Given a hirer is on the homepage of Venue Vendors, when the hirer clicks the 'search' link in the header, then the system should redirect the user to the search page, which should contain a suitability filter on the left hand side. 2. Given the hirer selects a suitability option, when the hirer clicks the 'search' button, then the system should display the venues matching the suitability filter. 3. Given the hirer is on the search page, when the hirer clicks the 'remove filter' button, then the system should remove the suitability filter, and instead display all the venues.
Managing venues	Vendors	As a vendor I want to create and list my venue so that it is visible to me and hirers	1. Given the vendor is on their dashboard page, when the vendor presses the 'add venue' button, then the system displays a new page with a form allowing the vendor to add details of the new venue. 2. Given the vendor opens the 'add venue' page, when the page loads, then the system should display a form with the following input fields: vendor phone, vendor email, venue name, address, suburb, state, postcode, capacity, rate, description, and suitability. 3. Given the vendor enters the new venue details, when the vendor submits the form, then the system should save the new venue in the MSSQL database. 4. Given the vendor has submitted the form to add a venue, when the vendor navigates to their dashboard, the new venue should be displayed with its details. 5. Given the vendor has submitted the form to add a venue, when a hirer logs into their account and views the recommended venues, then the system should also display the new venue in the recommended venues.
Managing venues	Vendor	As a vendor, I want to delete my venue, so that I can stop providing a venue for hire.	1. Given the vendor is on their dashboard page, when the vendor presses the 'Delete' button, then the venue should be deleted from the MSSQL database and should not display in the list of venues on the vendor's dashboard. 2. Given a vendor has deleted their venue, all associated applications, unavailability periods and shortlists (for hirers) should be deleted from the MSSQL database. 3. Given any user is on the search page, the deleted venue should not be displayed.
Managing venues	Vendor	As a vendor, I want to update the details of my venue so that customers can assess the suitability of the venue based on the most up-to-date information.	1. Given the vendor is on the page of their venue, when the vendor presses the 'Edit' button when viewing the Venue Details, the system should display a form populated with all the current information about the venue, allowing the vendor to edit all the details they wish to update. 2. When the vendor presses the 'Save' button, all the relevant fields should be updated with the latest information entered by the vendor in the MSSQL database. 3. When the user refreshes the venue's page, the updated details should be displayed for all users and this should be reflected when the vendor presses the 'View Venue Details' button.

Managing venues	Vendor	As a vendor, I want to unblock timeslots in my venue, so that I can accept hirer applications in that timeslot.	1. Given the vendor is logged in, when the vendor clicks the 'manage' button for their venue, then the system should load the venue page, which should have a sidebar displaying the blocked periods for the venue. 2. Given the vendor has a blocked timeslot, when the vendor clicks the 'unblock' button, then the system should remove the blocked timeslot from the user interface and database. 3. Given the vendor has unblocked a timeslot, when a hirer applies for the venue within the time period that used to be blocked, then the system should allow the application to proceed and store the application in the MSSQL database.
Booking	Vendor	As a vendor, I want to see a list of applications for upcoming events, so that I can select the appropriate hirers to provide hire of my venue to.	1. Given the vendor is on the page of their venue, they should see a list of all applications submitted for future events. 2. When the vendor clicks on an application, they should be able to view the applicant's name, reputation score and compliance score. 3. When the vendor clicks on "View Supporting Documents", the vendor should be able to see all the documents that the applicant has supplied to support their application.
Trend Analysis of Venues	Vendor	As a vendor, I want to view visual infographics relating to hirers who have applied for my venue, so that I can understand which hirers I should consider approving applications for.	1. Given the vendor is on their venue page, the vendor should be able to see a bar chart that shows the number of applications submitted by different hirers for the selected venue. 2. Given the vendor is on their dashboard, the vendor should see a stacked bar chart that shows the number of applications submitted by different hirers across all the vendor's venues. 3. Given the vendor is on their venue page, the vendor should be able to see a pie chart that contains the number of successful bookings (i.e. approved applications) made by different hirers for that venue. 4. Given the vendor is on their venue page, the vendor should be able to see a line graph showing the number of times a venue has been utilised over time. 5. When the vendor changes the time span for the line graph, the graph should update and show the utilisation of the venue in that period of time only.
User management	Admin	As an admin, I want to login to the admin dashboard, so that I can perform my duties as the administrator of the Venue Vendors website.	1. Given the admin opens the login page, when the page loads, then the system displays the login form with username and password fields. 2. Given the admin enters input into the password field, when characters are entered, then the characters are hidden/masked. 3. Given the admin has submitted a correct username and password combination, when the admin submits the form, then the system should redirect the user to their dashboard, alongside a notification confirming they have logged in. 4. Given the admin has submitted a correct and existing username and password combination, when the system has confirmed the inputted details match the correct admin details, then the system should provide a logout link for the logged-in user.

Managing venues	Admin	As an admin, I want to assign vendors to specific venues and swap assignments when needed, so that venues and vendors can be optimally paired.	1. Given the admin opens a specific venue's page, when the page loads, then the system should display a form with a field to select a vendor from a list of all vendors. 2. Given the admin selects a specific vendor to assign the venue to, when the admin presses the submit button, then the system should re-assign that venue to the selected vendor in the MSSQL database. 3. Given the admin has submitted the form with a new vendor, when the admin navigates to their dashboard, then the system should display the new assigned vendor's name attached to that venue. 4. Given the admin has submitted the form to assign the venue to a new vendor, when the old vendor of the venue navigates to their dashboard, then the system should no longer display the reassigned venue to their dashboard. 5. Given the admin has submitted the form to assign the venue to a new vendor, when the new vendor of the venue navigates to their dashboard, then the system should now display the new reassigned venue to their dashboard.
Managing venues	Admin	As an admin, I want to create, and view venues, so that hirers have more options to book from.	1. Given the admin is logged in, when the vendor presses the 'add venue' button, then the system displays a new page with a form allowing the administrator to add details of the new venue. 2. Given the admin opens the 'add venue' page, when the page loads, then the system should display a form with the following input fields: vendor phone, vendor email, venue name, address, suburb, state, postcode, capacity, rate, description, assigned vendor, and suitability. 3. Given the admin enters the new venue details, when the admin submits the form, then the system should save the new venue in the MSSQL database. 4. Given the admin has submitted the form to add a venue, when the vendor navigates to the admin dashboard, the new venue should be displayed with its details. 5. Given the admin has submitted the form to add a venue, when a hirer logs into their account and views the recommended venues, then the system should also display the new venue in the recommended venues and allow the venue to appear in search results.
Managing venues	Admin	As an admin, I want to update venues, so that venue data shown to hirers can be correct when venue information changes.	1. Given the admin is on the page of a specific venue, when the vendor presses the 'Edit' button when viewing the Venue Details, the system should display a form populated with all the current information about the venue, allowing the admin to edit all the details they wish to update. 2. When the admin presses the 'Save' button, all the relevant fields should be updated with the latest information entered by the vendor in the MSSQL database. 3. When the user refreshes the venue's page, the updated details should be displayed for all users and this should be reflected when the vendor presses the 'View Venue Details' button.
Managing venues	Admin	As an admin, I want to delete venues, so that hirers don't book for venues that are no longer available.	1. Given the admin is on the venue's specific page, when the hirer presses the 'Delete' button, then the venue should be deleted from the MSSQL database and should not display in the list of venues on the admin's dashboard. 2. Given an admin has deleted a specific venue, all associated applications, unavailability periods and shortlists (for hirers) should be deleted from the MSSQL database. 3. Given any user is on the search page, the deleted venue should not be displayed.

Managing venues	Admin	As an admin, I want to choose venues to appear on the Featured Venues section on the Hirers page, so that I can alter which venues are featured for hirers.	1. Given the admin navigates to a specific venue page, when the page loads, then the system should display a form with a button to feature that venue. 2. Given the admin clicks the button to feature that specific venue, when the page reloads, then the system should now display a form with a button to un-feature the venue. 3. Given the admin has clicked the button to feature the venue, when the admin navigates back to their dashboard, then the new featured venue should be displayed in the 'featured venues' section. 4. Given the admin has clicked the button to feature the venue, when any hirer navigates to their dashboard, then the new featured venue should be displayed in the hirer's 'featured venues' section. 5. Given the admin has clicked the button to un-feature the venue, when the admin/any hirer navigates to their dashboard, then the un-featured venue should no longer be displayed in the dashboard's 'featured venues' section.
Trend Analysis of Venues	Admin	As an admin, I want to generate reports of most popular venues and most active applicants, so that I can analyse the best-performing venues and most loyal hirers.	1. Given the admin clicks on the dashboard page, when the system loads the page, then there should be a worded report displaying details about the 3 most popular venues (with the most popular day and its timeslot), and the 3 most active hirer applicants. 2. Given one of the top 3 hirers has submitted an application and a vendor has accepted it, when the admin views the report, then the hirer's percentage of applications accepted should increase. 3. Given multiple hirers apply for any venues, when the admin views the report, then the report should change to account for the new applications. 4. Given the admin is on the dashboard page, when the admin clicks the 'download' button, then the system should create a pdf report with the details of the top 3 most active applicants and active hirers, downloading it to the admin's device.

ASSIGNMENT 1 ACCEPTANCE CRITERIA AND USER STORIES

Phase	US Number	Epic Theme	User Story	Acceptance Criteria	Value	Task Pass
A1	V1	Venue	As a hirer I want to view list of venues, so that I can see the range of venues available for hire	1. Given the hirer is on the venue browsing page, When the page loads, Then a list of venues available for hire is displayed. 2. Given venues are available, When the hirer views the list, Then each venue shows its name, location, capacity, price, image, and short description. 3. Given no venues are available, When the hirer opens the venue browsing page, Then the system displays a "No venues available" message.	High	c.ii

A1	V2	Venue	As a hirer I want to search a venue based on venue name, location, capacity, and recommended suitability, so that I can see a venue that is suitable for me	1. Given the hirer is on the venue browsing page, When the hirer selects or types a venue name, location, capacity, and recommended suitability in the location filter or any combinations of it, Then the system displays a list of matching venues for that specification. 2. Given a specific specification is entered, When no venues match the selected specification, Then the system displays a "No venues found" message.	Medium	e.i
A1	V3	Venue	As a hirer I want to select my preferred venues and rank them, so that I can come back later and apply them	1. Given the hirer is viewing available venues, When the hirer selects a venue, Then the venue is added to their preferred venue list. 2. Given the hirer is viewing their preferred venue list, When the hirer assigns or updates their ranking, Then the system saves and displays the venues in the chosen order. 3. Given the hirer has saved preferred venues, When the hirer returns later, Then the system displays the previously saved venues and their rankings. 4. Given the hirer has a saved preferred venue list, When the hirer chooses a venue to apply for, Then the system allows the hirer to continue to the application process. 5. Given the hirer has not selected any venues, When the hirer opens the preferred venue list, Then the system shows a message that no preferred venues have been saved.	Low	c.iii
A1	V4	Venue	As a hirer I want to submit an application to my selected venue, so that I can get a reply from the vendor	1. Given the hirer has selected a venue, When the hirer opens the application page, Then the system displays an application form for that venue. 2. Given the hirer is completing the application form, When the hirer leaves a required field empty, Then the system prevents submission and displays a validation message. 3. Given the hirer has completed all required application details, When the hirer submits the application, Then the system saves the application and displays a submission confirmation. 4. Given the hirer has submitted an application, When the hirer views their dashboard later, Then the submitted application and its status are displayed.	High	c.iv

A1	UM2	User Management	As a hirer I want to log in using email and password, so that I can use the web app	1. Given the hirer is on the login page, When the hirer enters a matching email and password and submits, Then the system grants access and navigates the hirer to their dashboard. 2. Given the hirer is on the login page, When the hirer enters an incorrect or mismatched email and/or password and submits, Then the system rejects the login attempt and displays an error message.	high	b
----	-----	-----------------	---	---	------	---

A1	UM3	User Management	As a hirer I want to enter and update my profile details such as name and phone number, so that my information is accurate and up to date	1. Given the hirer is logged in, When the hirer opens the profile page, Then the system displays editable fields for name and phone number, and non-editable fields for email and password (as these were already registered during sign-up). 2. Given the hirer updates their name or phone number, When the hirer saves the changes, Then the system updates and stores the new profile information and displays a confirmation message. 3. Given the hirer enters invalid data (e.g., empty name or invalid phone number format), When the hirer attempts to save, Then the system prevents submission and displays a validation error message. 4. Given the profile has been successfully updated, When the hirer returns to the profile page, Then the updated name and phone number are displayed.	low	c.i
----	-----	-----------------	---	---	-----	-----

A1	UM4	User Management	As a hirer I want to log out, so that I can close the app securely.	1. Given the hirer is logged in, When the hirer clicks the "Log Out" button in the navigation bar or profile dropdown, Then the system signs the hirer out and displays a confirmation message (e.g., "You've been successfully logged out") before redirecting to the login page. 2. Given the hirer has logged out, When the hirer attempts to access a protected page via the browser, Then the system redirects the hirer back to the login page. 3. Given the hirer has logged out, When the hirer views the navigation bar, Then the profile option is no longer displayed. 4. Given the hirer is logged in, When viewing any page, Then the "Log Out" button is accessible via the navigation bar or the profile dropdown menu.	high	b
A1	UM5	User Management	As a hirer I want to view my hiring reputation based on the historical list of previous bookings	1. Given the hirer is on their profile or dashboard, When the page loads, Then the system displays a list of previous bookings including pre-loaded sample data. 2. Given the hirer has completed a successful new booking, When the hirer views their hiring reputation page, Then the new booking is listed alongside existing booking history.	high	c.v
A1	UM6	User Management	As a hirer I want to update my profile with compliant documents such as driver's license and public liability insurance as an uploaded file, so that my credibility improves	1. Given the hirer is uploading a compliant document including image, When the selected file size exceeds 2 MB, Then the system prevents the upload and displays a file size validation error. 2. Given the hirer selects a file for upload, When the file type is not supported, Then the system prevents the upload and displays a file type validation error. 3. Given the hirer uploads a PDF document, When the upload is successful, Then the system stores the file using IndexedDB or as a base64 string. 4. Given the hirer uploads a non-PDF file, When the upload is successful, Then the system stores the file in the MSSQL database.	high	HD

A1	UM7	User Management	As both the hirer and vendor I want to see a hirer's credibility score based on the actual document submitted, so that I know my score which indicates the hirer's application chance of success	1. Given the hirer or vendor is viewing the hirer's profile, When the profile loads, Then the system displays the hirer's credibility score as a percentage or numerical value. 2. Given one or more required documents are missing, when the system calculates the score, Then the missing document contributes 0% to the total score 3. Given the hirer uploads or replaces a document, when the upload is successful, Then the system recalculates and updates the credibility score immediately. 4. Given the hirer is logged in, when they view their profile or dashboard, then the credibility score is visible to them.	high	HD and d.ii
----	-----	-----------------	--	---	------	-------------

	UM8	User Management	As a vendor, I want to enter and update my profile details (name and phone number), so that my information is accurate and up to date.	1. Given the vendor is logged in, When the vendor opens the profile page, Then the system displays editable fields for name and phone number, and non-editable fields for email. 2. Given the vendor updates their name or phone number, When the vendor saves the changes, Then the system updates and stores the new profile information. 3. Given the vendor enters invalid data (e.g., empty name, invalid phone number), When the vendor attempts to save, Then the system prevents submission and displays a validation message. 4. Given the profile is successfully updated, When the vendor returns to the profile page later, Then the updated information is displayed.	low	c.i
A1	B1	Booking	As a hirer I want to make a booking by submitting application, so I can secure the venue for my event	1. Given the hirer has selected a venue, When the hirer opens the booking/application page, system will display some information such as: event name, number of expected guests, and date, time and duration of proposed event. 2. Given the hirer is completing the form, When the hirer leaves any required field empty, Then the system prevents submission and displays a clear validation message. 3. Given the hirer has completed all required fields with valid data, When the hirer submits the application, Then the system saves the application and displays a confirmation message.	high	c.iv
A1	B2	Booking	As a vendor I want to view list of booking applications, so I can select the suitable hirer	1. Given the vendor is logged in, When the vendor navigates to the applications page, Then the system displays all submitted applications in a list or similar view. 2. Given applications are listed, When the vendor selects an application, Then the system displays the full details of that application. 3. Given the vendor is reviewing an application, When the vendor chooses to act on it, Then the system provides options to accept or deny the application.	high	d.i

A1	B3	Booking	As a vendor I want to view hirer's historical hire list, so I can judge their credibility and make decision about their application	1. Given the vendor is logged in, When the vendor selects a hirer. Then the system shall display the hirer's historical hire list containing records/ rows showing venue name, location, event name, date of hire and star rating (out of 5). And last record showing total num of events, number of venue locations and average of star rating. 2. Given the hirer has no past bookings, When the vendor views history. Then the system shall display "No past hiring history available"	low	d.ii
----	----	---------	---	---	-----	------

A1	B4	Booking	As a vendor I want to view hirer's compliant documents, so I can judge their credibility and make decision about their application	1. Given the vendor is reviewing a hirer, When the vendor opens the hirer's profile. Then the system shall display uploaded compliant documents. 2. Given documents are available, Then the system shall support viewing: Driver's license (image) Insurance certificate (PDF) Business registration (PDF, if applicable) 3. Given some documents are not uploaded, When the vendor views the profile. Then the system shall indicate missing documents clearly. 4. Given documents are displayed, When the vendor reviews them. Then they should support assessing hirer credibility.	medium	d.ii
A1	B5	Booking	As a vendor I want reject an application, so that I can find a better / more suitable hirer	1. Given the vendor is reviewing an application, When the vendor selects the reject option, Then the system marks the application status as "Rejected" and updates the record accordingly. 2. Given an application has been rejected, When the status is updated, Then the applicant is notified (if applicable) and the venue remains available for other incoming applications.	High	d.iii
A1	B6	Booking	As a vendor I want to accept an application for a venue at particular date and time, so I begin hiring transaction process	1. Given the vendor is reviewing an application, When the vendor selects the accept option for a specific date and time, Then the system updates the application status to "Accepted" and initiates the hiring process. 2. Given an application has been accepted, When the status is updated, Then the application status in the hirer page will be changed.	High	d.iii and d.v
A1	B7	Booking	As a vendor I want to block a venue availability period, so that no one can book it at that particular time period	1. Given the vendor is managing venue availability, When the vendor selects a range of time to block a venue, Then the system saves the blocked period and prevents any bookings within that range. 2. Given a period has been blocked, When any user views the venue availability or calendar, Then the blocked period is clearly indicated and cannot be overridden by hirers. 3. Given the hirer submit an application, When the selected date/time conflicts with an unavailable or blocked period, Then the system prevents submission and displays "Selected date/time is unavailable."	High	e.iii

A1	B8	Booking	As a vendor I want to add comments on chosen hiring candidates, so that I can record notes and feedback about selected applicants	1. Given the vendor has accepted an application, When the vendor views the chosen candidate's booking details, Then the system displays a comment/notes input field associated with that candidate. 2. Given the vendor enters a comment, When the vendor saves the comment, Then the system stores and displays the comment linked to that chosen candidate. 3. Given the vendor has previously saved a comment, When the vendor revisits the chosen candidate's details, Then the previously saved comment is retrieved and displayed. 4. Given the vendor edits an existing comment, When the vendor saves the updated comment, Then the system replaces the old comment with the new one and confirms the update. 5. Given the comment field is empty, When the vendor attempts to save, Then the system either keeps the existing comment unchanged or saves an empty state without error.	Medium	d.iv
A1	B9	Booking	As a vendor I want to sort the applicants list by reputation score, so that I can quickly identify the most reliable hirers	NOTE: All reputation scores are hardcoded. 1. Given the vendor is viewing the list of applicants, When the vendor selects sort by reputation score, Then the system reorders the applicants from highest to lowest reputation score by default. 2. Given an applicant has been rated by previous vendors on a 0-5 star scale, When the reputation score is calculated, Then the system displays the average star rating across all previous vendor ratings for that applicant. 3. Given an applicant has no previous ratings, When the vendor views the sorted list, Then unrated applicants display a 'No rating' indicator and are positioned at the bottom of the sorted list. 4. Given the vendor toggles the sort direction, When sorting by reputation score, Then the list updates to reflect ascending or descending order accordingly. 5. Given the reputation score is displayed, When the vendor views any applicant in the list, Then the score is shown as a star rating between 0 and 5 stars alongside the applicant's name and other details.	High	e.ii
A1	RD1	Report and dashboard	As a vendor I want to see an infographic that shows the name of most chosen applicant, least chosen applicant, and failed applicants, so that I can better understand about my venues potential hirers	1. Given the vendor is on their dashboard, When the page loads, Then the system displays an infographic showing the most chosen applicant, least chosen applicant, and failed applicants based on current application data. 2. Given application data has been updated, When the vendor views the dashboard infographic, Then the information displayed accurately reflects the latest application results.	High	f
